

Token Holder Rights – DRONERA Project

1. Economic Rights

- Right to receive 50% of net profits from Dronera operations, distributed via smart contract mechanisms or staking rewards.
- Access to buyback programs, with profits allocated to repurchasing DRN tokens, reducing circulating supply and increasing value.
- Anti-dilution protections through pre-emptive rights to purchase tokens in subsequent phases at initial offered prices.

2. Governance Rights

- Optional participation in governance voting (DAO), including decisions on:

R&D directions (e.g., propulsion tech, software upgrades)

Licensing models (white-label, revenue share)

Treasury and liquidity strategies

- Governance weights are proportional to token holdings, with planned activation of Quadratic Voting for fairness.

2. Access and Participation Rights

- Early access to Dronera platform features, software, reports, and partner initiatives.
- Priority participation in pilot programs, beta testing, and new token launches.
- Right to suggest or propose strategic initiatives via DAO channels (future).

3. Legal & Contractual Rights

- Token ownership is paired with a Joint Venture Agreement (JVA), ensuring that loss of token access does not eliminate the underlying participation right.
- Rights are validated both on-chain (smart contract) and off-chain (signed agreement), ensuring dual-layer protection.

4. Transparency Rights

- Right to receive audited reports on profit distribution, project progress, expenses, and treasury operations.
- Access to a public dashboard tracking buybacks, burns, governance votes, and other key activities.

6. Exit & Liquidity Rights

- Right to benefit from an exit event, including exchange listing, M&A, or DAO spin-out, with proportional value allocation.
- Optional OTC repurchase eligibility under Dronera's buyback program, based on quarterly performance.

7. Compliance & Security Rights

- Assurance that participation complies with EU MiCA, KYC/AML, and smart contract audit standards.
- Right to data privacy under GDPR for all off-chain processing.
